

MOFR Website Overview

Vision statement

To become a highly respected forest agency with the professional competency to manage the forest resources of Solomon Islands in perpetuity.

The Project on Capacity Development for Sustainable Forest Resource Management in Solomon Islands

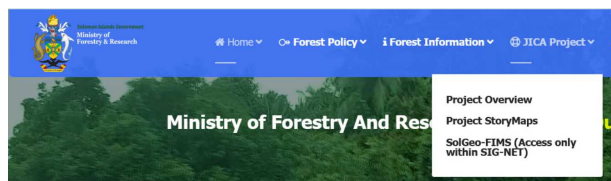

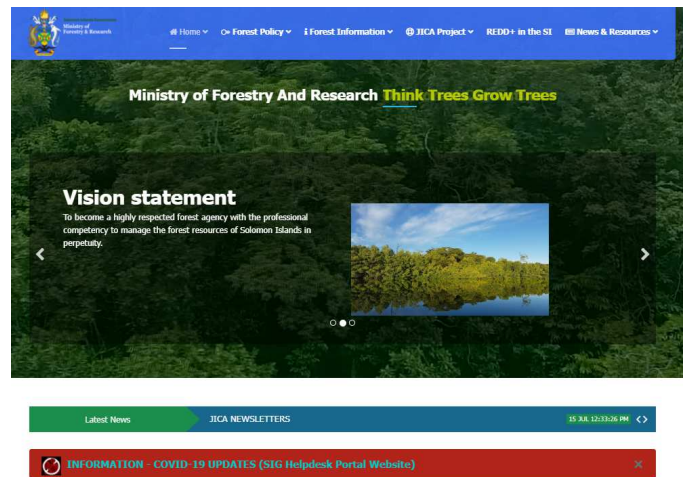

The MOFR website is a corporate website of the Ministry of Forestry and Research. It is built using Joomla CMS. The website URL can be accessed at:

<https://www.mofr.gov.sb/>

(Background)

MOFR's website continues to serve its audience by providing Solomon Islands Forestry information as well as other vital information about forestry management and day-to-day operations.

This website also provides an overview of the SFRM project, a collaboration between JICA and MOFR. JICA's work for the Ministry of Forestry and Research. As seen on the website under the JICA Project, the Project Overview, Project StoryMaps, and SolGeo FIMS are available for view.

Solomon Islands SFRM project

SFRM stands for "Sustainable Forest Resource Management". The goal of the project is to develop the capacity for Sustainable Forest Resource Management in Solomon Islands. This webpage introduces the activities under the project.

Organization Structure

Website Capabilities

External User Access

- Users can view the website with different screen resolutions depending on their devices (mobile responsive)
- Access to GIS data layer from the website front end for registered users
- Users can download content available for external users from the website
- Users can find all href or links for other subsystems from the main sites
- Users can post a discussion through social media and view posts by other end users

Internal User Access

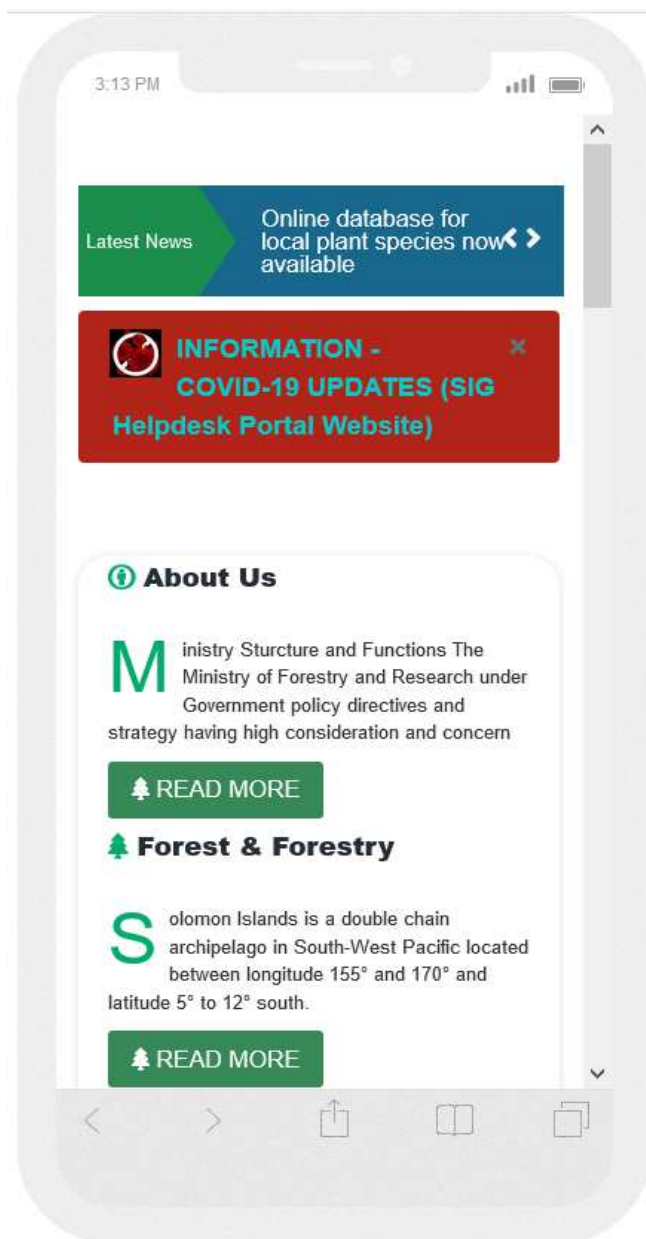

- Users can login to publish data
- Users are assigned privileges based on their organizational roles
- Registration is required for access to certain restricted content
- Super users can approve the user registrations of new users
- Users can upload multimedia files to the website

System Capabilities

- The system is mobile responsive
- The system has user registration and approval by the admin
- The system has a content management portal for admin user content publication
- The system is SEO (Search Engine Optimization) friendly
- The system has an editing tool
- The system has a search function for website content searches
- The system can display all the matching results based on a current search
- The system has article archiving
- The system has multi-language support

These are the primary goals of the new MOFR website:

- Improve the overall look and feel of the MOFR website and bring it into line with best practices and other government sites, both locally and internationally
- Provide more user friendliness and easier navigation while improving the customer experience
- Better website performance (Bootstrap design)
- Make the website easier to update internally
- Ensure that people using assistive technologies, or alternative browsing devices, can use the website

Website Benefits

With the steady growth of online presence on websites via mobile phones, computers, and tablets, they have become determining factors for an organization's success.

The Ministry of Forestry and Research can now reach out to Solomon Islands, its stakeholders, and other audiences on the world wide web through the MOFR website to share document files and other information pertaining to MOFR's function and roles as a ministry of the Solomon Islands Government.

MOFR Website Structure

Joomla CMS
(Content Management System)

- The system was built using Joomla Content Management System (CMS) and these latest scripts and framework technology: PHP 7, HTML5, CSS4 and Bootstrap
- The system back-end database is MySQL
- The CMS framework is Joomla CMS
- The website is hosted locally at Our Telekom webhosting.
- The system has a three-tier architecture with presentation logic, business logic, and data logic
- The system is dynamic where content changes and updates can be done by non-IT staff
- The system supports GIS and social media collaboration, such as links to Facebook and other sites
